The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/600,044

Applicant(s)

WOOD ET AL.

Examiner

Joel M. Lamprecht

Art Unit

3737

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 November 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-50 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-50 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/CDC)
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____
- Paper No(s)/Mail Date: _____

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/28/07 has been entered.

Claim Objections

Claims 10, 40-49 objected to because of the following informalities: Regarding claim 10, "the axis" lacks antecedent basis. Regarding claims 40-49 the term "breast" as recited in claim 40 does not set forth any additional structural limitations, "the correction threshold" as recited in claim 41 lacks antecedent basis, in claims 43, and 44 "the fraction" lacks antecedent basis, and in claim 46 the preamble is inconsistent with the independent claim from which it depends. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 50 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In the instant case, the disclosure of performing a two-dimensional resampling if the estimated amount of patient motion equals or exceeds the threshold by a certain amount and performing a three-dimensional resampling if the motion exceeds the threshold by a second amount is not disclosed within the specification. The specification discloses the use of a threshold to determine if a two-dimensional or three-dimensional resampling should be performed in one case, or if a resampling can be avoided [0049-0050] or if a three-dimensional resampling should be performed in another case.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 38-40 are rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential structural cooperative relationships of elements, such omission amounting to a gap between the necessary structural connections. See MPEP § 2172.01. The omitted structural cooperative relationships are: That of the medical imaging system and the device of claim 29.

Claim 21 is rejected under 35 U.S.C. 112, second paragraph as it contradicts the limitations set forth in independent claim 15 from which it depends.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-5, 12-15, 21, 22, 29, 35-41, and 47-50 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thevenaz et al. (IEEE Transactions on image processing Vol 7, No 1, Jan 1998) in view of Hibbard et al (US 6,266,453 B1).

Regarding Claims 1-5, Thevenaz et al. disclose a registration method comprising an iterative loop which estimates patient motion within a set of medical images *after* a resampling has been performed. The motion estimation taking place in a directional

axis and corresponding to a lowest image resolution (Page 27 Col 2), and using an estimated motion procedure in a three dimensional rigid-body transformation (Page 29 Col 1 & 2). Additionally, a correction threshold is used to compare estimated patient motion and resampling based upon that comparison (Page 28 Col 1, and Page 29-30).

Regarding Claims 12-15 and 50, iterative loops of Thevenaz et al. disclose a resampling where in the event that patient motion equals or exceeds the threshold it uses one resampling procedure (a three dimensional image resampling), and performing a second image resampling procedure in the event that the estimated patient motion is less than the correction threshold (a two dimensional image resampling (Page 29 Col 2 – Page 30 Col 1; also Page 27 Col 1).

Regarding Claims 21 and 22, it is inherent that if a method is setup to perform a function as in Claim 15, the program, media, or method used from Claim 15 can be setup to do nothing in the event that the estimation of motion is less than the correction threshold by a set amount. When a threshold is set, as on Page 27 Col 2, 3-D registrations, as well as simpler transformations cannot be preformed, of which avoiding an image resampling would be a much easier procedure than performing one.

Regarding Claims 29, 35-37, 41, 47-49, it is inherent that both a computer readable medium and a processor are required for MRI/PET 2D/3D registration procedures as it is mandatory to have both a computer and computer readable medium to be able to process the vast arrays of numbers and calculations taking place during a medical imaging procedure.

Thevenaz et al disclose the invention as claimed, except for the fact that the iterative process disclosed performs a resampling before the motion estimation is calculated for the first time and does not explicitly disclose the use of an MRI system for acquisition of the images. Attention is then directed to the secondary reference by Hibbard et al which discloses the use of a motion estimation procedure which performs an estimation of the in-plane versus out-of-plane motion of imaging data acquired by an MRI system before a resampling (Col 5 Line 23-40) is performed in selectively two or three dimensions (Col 12 Line 60—Col 13 Line 63, Col 15 Line 30 – Col 16 Line 65, Specifically, Col 16 Lines 45-51). It would have been obvious to incorporate the processing methods of Hibbard et al in the applications of Thevenaz et al for the purpose of reducing unnecessary calculation time and processing as performed by the system (Col 7 Line 30-60).

Claims 6-11, 16-20, 23-28, 30-34, and 42-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thevenaz et al. in view of Hibbard et al. as applied to claims 5, 15, 22, 29, and 41 above and in further view of Hill et al.

Regarding Claims 6-11, 16-20, 23-28, 30-34, and 42-46 Thevenaz in view of Hibbard discloses all that is listed above, but does not touch on specific thresholding parameters, even though in a pyramid registration and deblurring it is hinted that the threshold is some fraction of the image resolution. In addition, Hibbard does not disclose accuracy to the level as required by the instant application (Col 10 Line 65 - Col 11 Line 8). Attention is then directed to the reference by Hill et al. which discloses a

majority of the same information disclosed by Thevenaz in view of Hibbard, but also discloses more in depth descriptions of registration. Hill et al. discloses a method of finding a correction threshold in Section 11 where images are compared and corrected to a standard, a standard which can be as accurate as .5mm in size, much smaller than the .75mm suggested as a 0.5 fraction of a slice thickness from the Applicant's specification. Utilizing the error calculations disclosed in Section 11, as well as the logic in the first sentence from Section 11, it would have been obvious to one having normal skill in the art at the time of the invention to use the methods of comparing blurriness, and translation suggested by Hill et al. with the methods of convergence by Thevenaz in view of Hibbard in order to quantify whether a particular image is within a correction threshold and would be "sufficiently accurate" for a given application, thereby discerning which algorithm to utilize.

Regarding Claims 11 and 28 Thevenaz in view of Hibbard does not disclose characterizing an image signal relative to a background. Attention is directed then to section 10.3.1 from Hill et al. for a disclosure of signal intensity characterization relative to a background, a precontrast ISI, and post contrast ISI. It would have been obvious to one in the art to use the methods disclosed by Hill et al. with the disclosure of Thevenaz in view of Hibbard in the same area of endeavor, in order to facilitate registration with accurate representation of spatial resolution without interference by a background.

Regarding Claims 9, 10, 19, 20, 26, 27, 33, and 34 the Examiner has interpreted the Claims to read an "image resolution along a lowest image resolution axis" as some size of pixels or voxels in the smallest direction. Thevenaz in view of Hibbard discloses

a method for computing a correction threshold where multiple algorithms can be selected based on the Marquardt-Levenberg algorithm (see Section 3) but does not disclose a correction threshold along a lowest image resolution axis. Attention is then directed to the secondary reference by Hill et al. which discloses a method for computing the accuracy of the resolution down to .5mm, which, in light of the specification, corresponds to a fraction of the voxel/pixel resolution along the lowest resolution axis. Therefore, it would have been obvious to one having normal skill in the art at the time of the invention to have incorporated the accuracy measures described in Hill et al. with the threshold selection process of Thevenaz in view of Hibbard in order to utilize multiple algorithms selectively during a medical image registration.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joel M. Lamprecht whose telephone number is (571) 272-3250. The examiner can normally be reached on Monday-Friday 8:30AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian L. Casler can be reached on (571)272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
